About

Cybersecurity and Computer Science undergraduate with a strong bias toward hands-on security engineering, offensive security tooling, and web infrastructure. I enjoy breaking systems methodically, documenting what fails, and rebuilding them stronger.

My interests sit at the intersection of red teaming, Linux internals, scripting, and modern web deployment pipelines. I value clean logic, reproducible processes, and security decisions backed by evidence; not vibes.

Skills

Cybersecurity & Sytems

- Penetration testing fundamentals, vulnerability assessment, threat modeling, Linux system administration, networking basics, security tooling in Kali Linux, reconnaissance workflows, and report writing.

Programming & Scripting

- Bash scripting, Python, JavaScript, HTML5, CSS3. Automation of repetitive tasks, scripting security checks, and building utilities for operational efficiency.

Education

Chuka University, Kenya – BSc Computer Science

AUGUST 2023 - PRESENT

- Relevant focus areas include programming, data structures, networking, operating systems, and foundational cybersecurity concepts.

Kisasi High School, Kenya - KCSE

JAN 2019 - DEC 2022

- Completed secondary education with a strong foundation in mathematics, sciences, and problem-solving, supporting further studies in computer science and cybersecurity.

Languages & Tools

Bash Scripting | Python | JavaScript | HTML | CSS | Git | GitHub | Linux | Kali Linux Tools | Networking Fundamentals | CLI Proficiency | SQL | Vercel Deployment | Domain & DNS | VS Code | Markdown | Virtualization | Security Basics

Projects

scanet | [Source Code](#)

SEP 2025

- A Bash network scanning utility designed to enumerate hosts, services, and basic vulnerabilities in local and test environments.

lausto | [Source Code](#)

NOV 2025

- A Hydra-style terminal automation tool written in Bash to streamline repetitive command-line tasks and workflows.
